

Installation

1. Unzip react-webapp
2. Run "npm install"
3. Run "npm install aws-sdk"
4. The package.json will look like

```
1  {
2    "name": "react-webapp",
3    "version": "0.1.0",
4    "private": true,
5    "dependencies": {
6      "aws-sdk": "^2.291.0",
7      "react": "^15.5.4",
8      "react-dom": "^15.5.4",
9      "whatwg-fetch": "^2.0.3"
10   },
11   "devDependencies": {
12     "react-scripts": "0.9.5"
13   },
14   "scripts": {
15     "start": "react-scripts start",
16     "build": "react-scripts build",
17     "test": "react-scripts test --env=jsdom",
18     "eject": "react-scripts eject"
19   }
20 }
21
```

5. Run "npm start"
6. Open the chrome browser and launch the mentioned url

Compiled successfully!

The app is running at:

http://localhost:58419/

Note that the development build is not optimized. To create a production build, use `npm run build`.

[illegible]

Test Document

1. Launch the application
